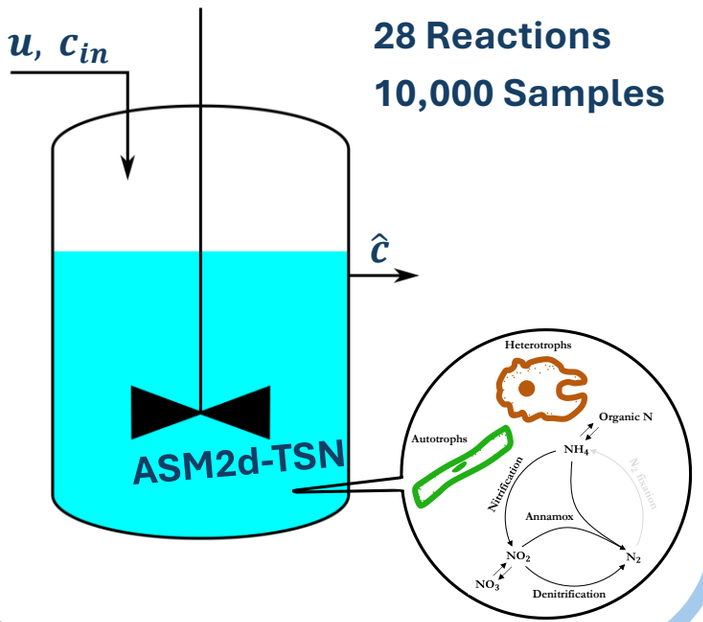
Steady-State CSTR Simulation



20 States
28 Reactions
10,000 Samples

ICSOR Framework

Inputs: $u, c_{in}, \phi(u, c_{in})$

Coupled driver: $d = B\phi, R =$

Hierarchical deployment:

Physically admissible state $\hat{c}$

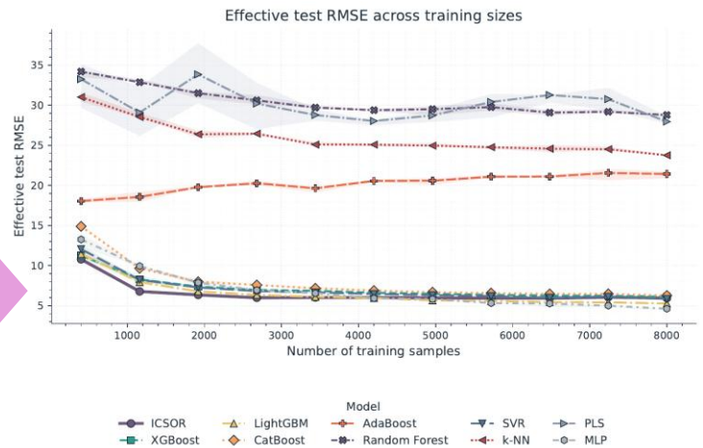
Mass conservation

$Ac = Ac_{in}$

Non-Negativity

$c \geq 0$

Benchmark Comparison



0% Mass Violations
Non-Negativity Violations

Interpretable

Accurate
